● CRAFT METHOD

- Pour salt on a piece of paper, enough to make a layer about $\frac{1}{4}$ "thick in your chosen container.
- Take your chosen chalk colour and rub the chalk back and forth across the salt until you get the desired colour saturation.
- Carefully, pour layer of coloured salt into container.
- Use the opposite side or a new piece of the paper for a new colour
- Pour layers at angles and around the jar to get interesting strata. You can rotate the jar while pouring to achieve this.
- Repeat process with new colours until jar is completely full. Take care not to shake the jar as this will mix the layers up – brown salt, no fun. Add lid and Voila!
